

This gel depicts the NEB 1kb ladder and a digestion of the plasmid pAAV-hSyn-dLight1.1 with the following enzymes: SmaI, HindIII-HF, and PciI.

Plasmid 111066:
pAAV-hSyn-dLight1.1

DNA digested with SmaI single digest and HindIII-HF/ PciI double digest for **2 hours**.
Gel: 0.8% agarose stained with 6 uL of ethidium bromide.
Ran for 1.5 hours at 100 volts.
