

This gel depicts the NEB 1kb ladder and a digestion of the plasmid pAAV-CAG-dLight1.1 with the following enzymes: SmaI, PciI, and XbaI.

Plasmid 111067:
pAAV-CAG-dLight1.1

DNA digested with SmaI single digest and PciI/XbaI double digest for **2.5 hours**.
Gel: 0.8% agarose stained with 6 uL of ethidium bromide.
Ran for 1.5 hours at 100 volts.
