

# Synthetic ribosome skip sequence derived from *Thosea asigna* virus

Documentation for Addgene deposit

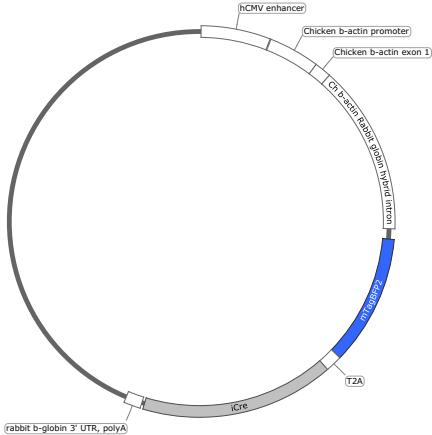

Hyung-song Nam and Mario R. Capecchi

TaV 2A protein sequence from mGRASP constructs  
Kim et al., *Nature Methods*, 9, 96–102 (2012)

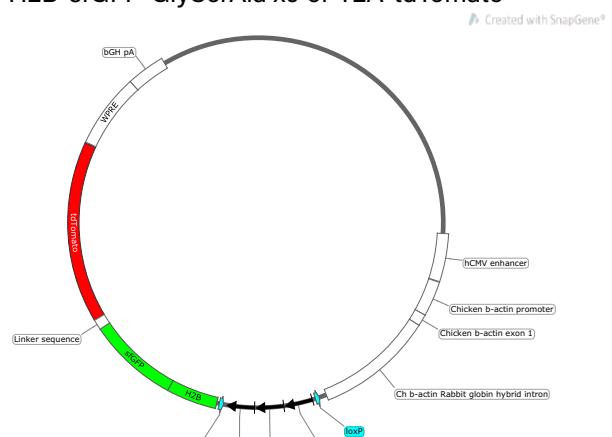

*Visually checking 2A skip in human cells*

CAGGS-mTagBFP2-T2A-iCre

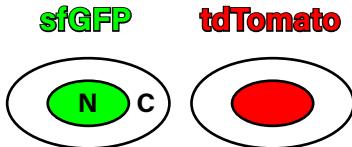

CAG-loxP-3pA-loxP-  
H2B-sfGFP-GlySerAla x9 or T2A-tdTomato

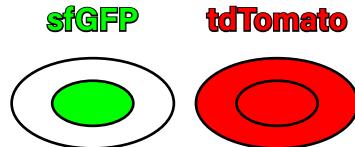

## No skip, GlySerAla x9

No skip of tdTomato from  
H2B-sfGFP → nuclear localized tdTomato

## Skip, 2A

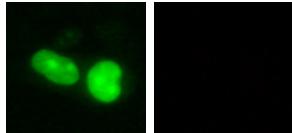

Efficient skip of tdTomato from  
H2B-sfGFP → diffuse tdTomato

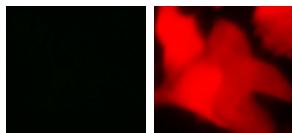

Calcium phosphate transfections of  
293T transformed human embryonic kidney epithelial cells

Fluorescence from live cells

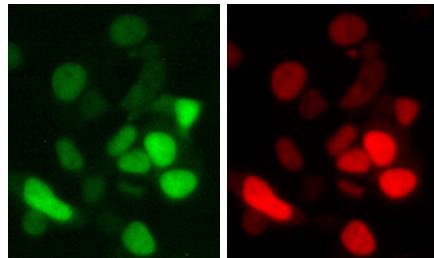

H2B-sfGFP only

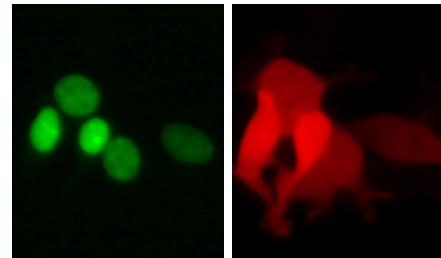

tdTomato only

H2B-sfGFP-GSAx9-tdTomato

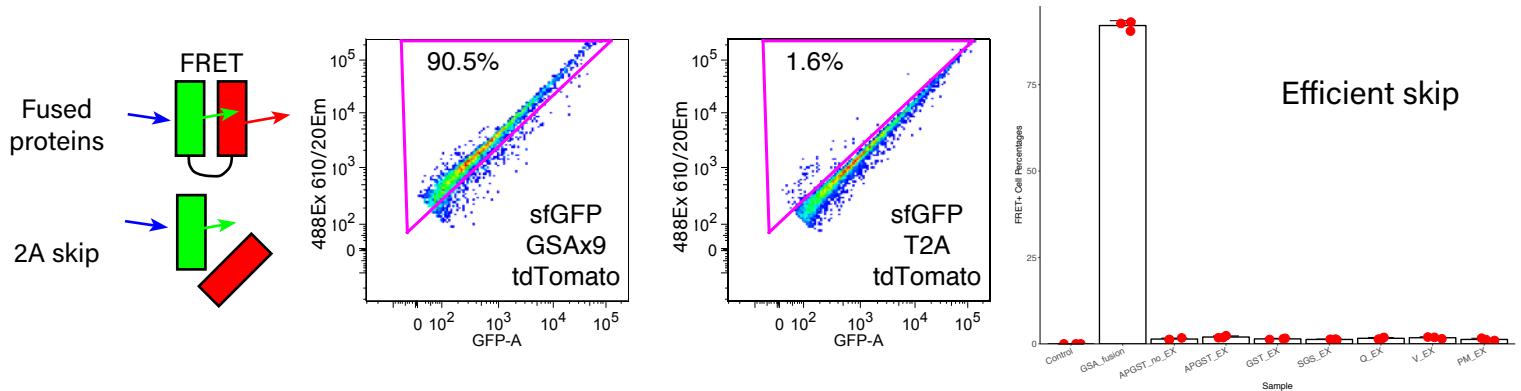

H2B-sfGFP-T2A-tdTomato

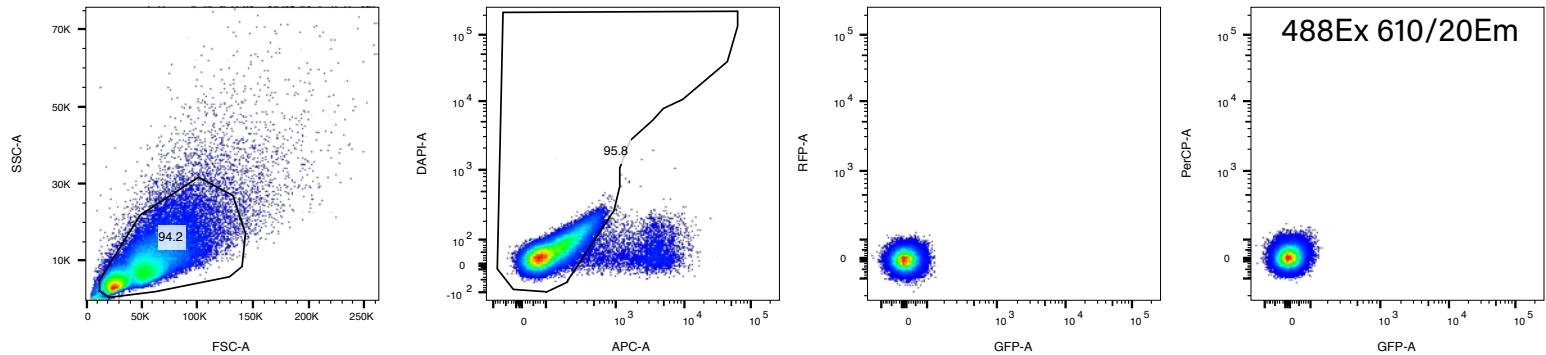

# Quantifying 2A skip by fluorescence resonance energy transfer

293T cells (calcium phosphate transfections)

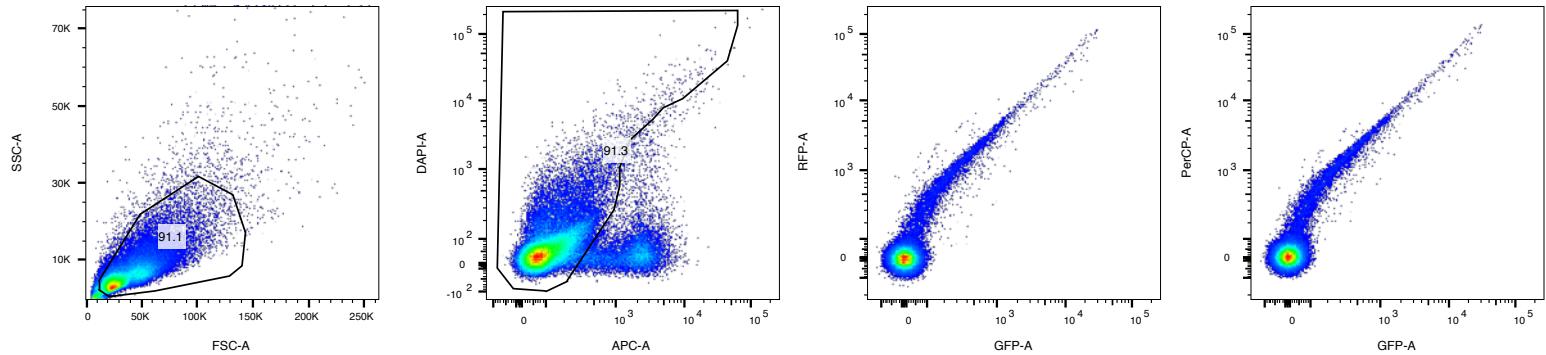

FRET from sfGFP (minus H2B) to tdTomato  
in DRAQ7- mTagBFP2+ cells (viability and transfection controls)

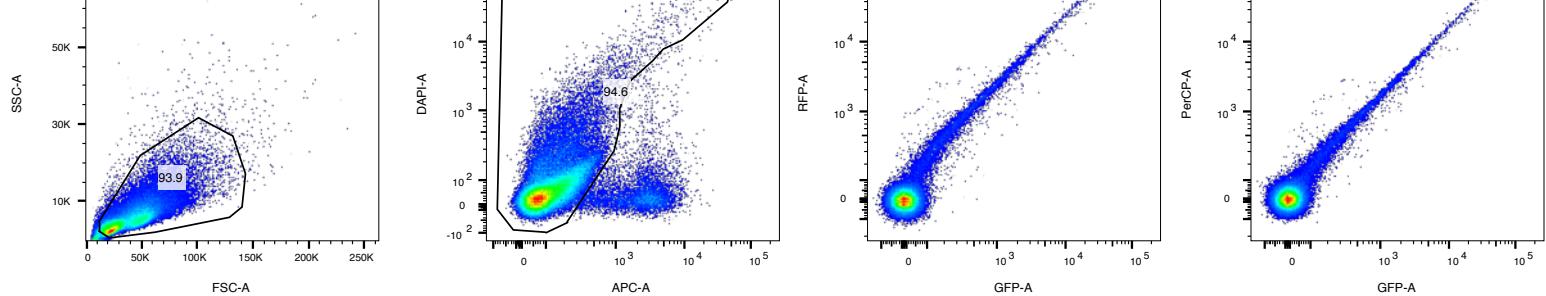

Control non-fluorescent plasmids

sfGFP GSAX9 tdTomato

sfGFP T2A tdTomato

## Measuring the fluorescence intensities of first and second proteins

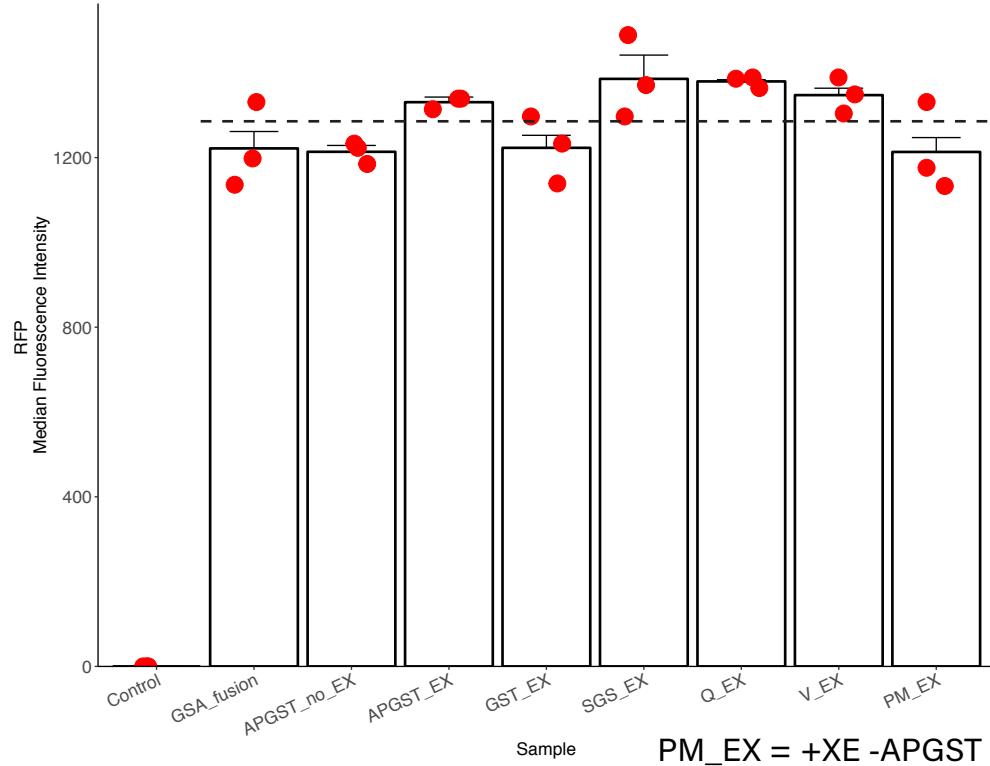

GFP or RFP Median Fluorescence Intensity in cells gated for GFP+ or RFP+

Constructs of sfGFP and tdTomato fused by GSAX9 or T2A sequences with different linkers

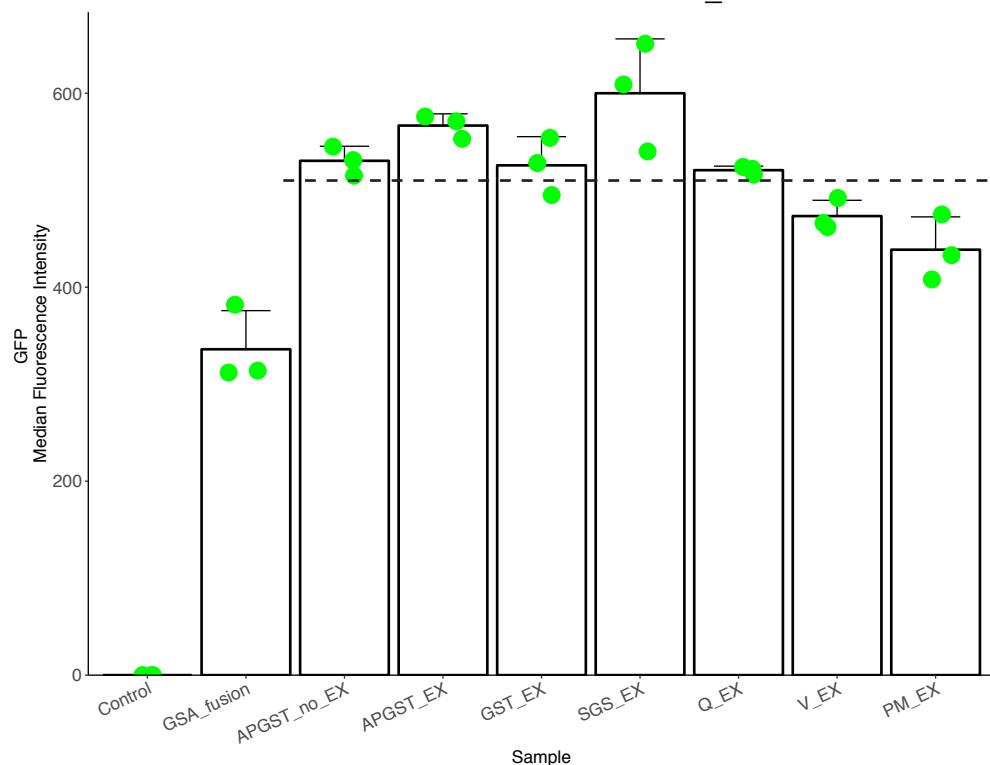

293T cells (calcium phosphate transfections)

All T2A constructs skipped (see previous page)

TdTomato protein fluorescence of skipping constructs appear to be similar to the unskippable GSAX9 fusion, suggesting 1:1 ratio of skipped first and second proteins

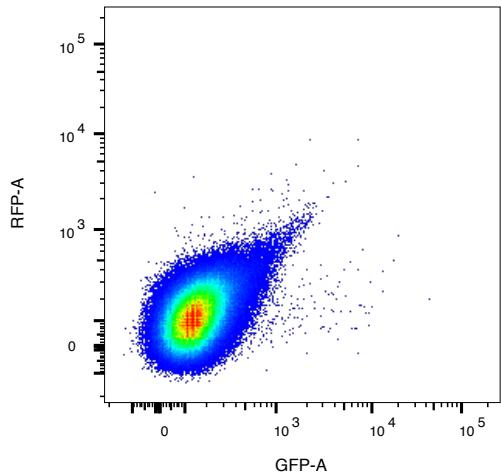

Unfortunately sfGFP in GSAX9 is quenched due to FRET?  
Additional calculations are necessary to demonstrate similar fluorescence of the first protein

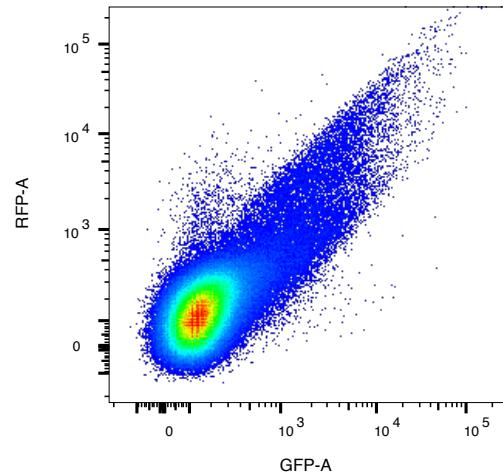

*Visually checking 2A skip in mouse cells*

Electroporations of mouse embryonic stem cells

CAG-loxP-3pA-loxP-H2B-sfGFP-T2A-tdTomato (-XE +APGST) + Bluescript2

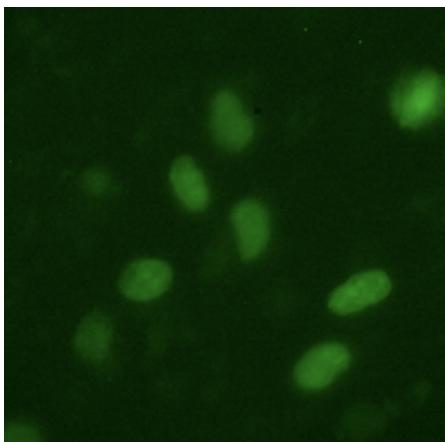

CAG-loxP-3pA-loxP-H2B-sfGFP-T2A-tdTomato (-XE +APGST) + CAGGS-pac-T2A-iCre

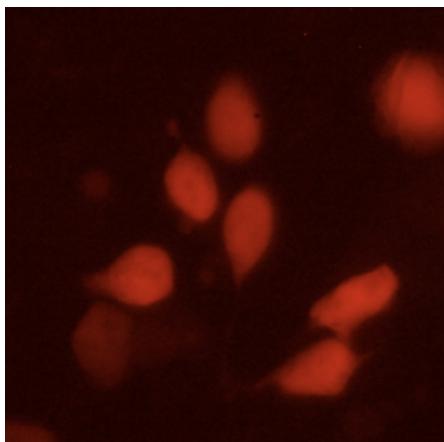

CAG-loxP-3pA-loxP-H2B-sfGFP-T2A-tdTomato (-XE +APGST) + CAGGS-pac-T2A-iCre

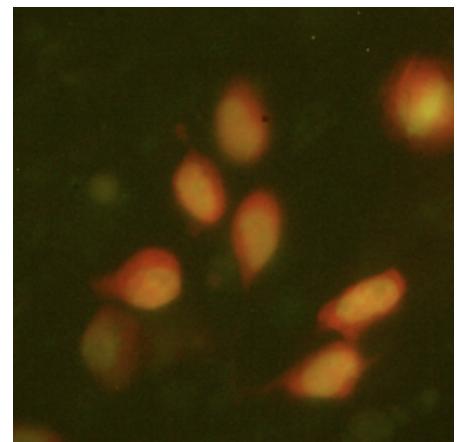

**GFP**

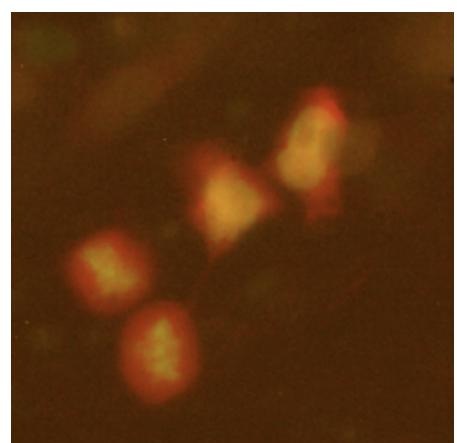

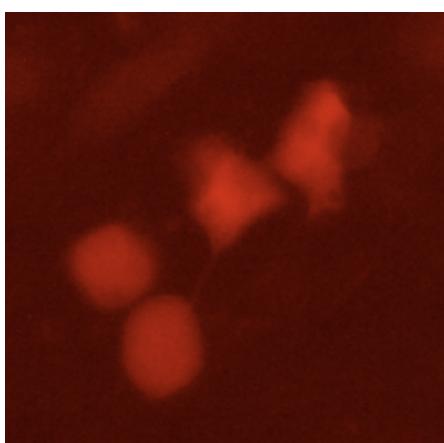

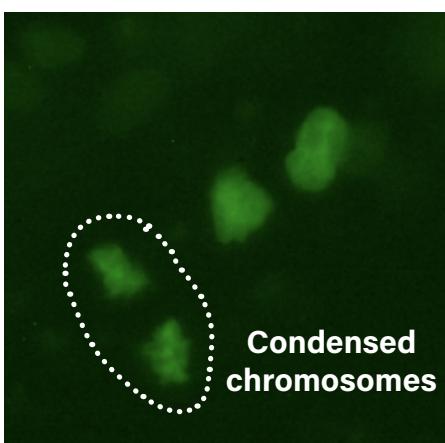

**RFP**

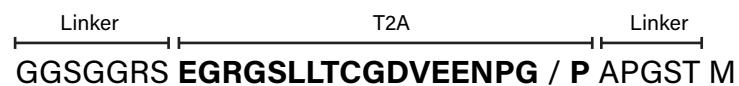

**Merge**

Condensed chromosomes

A synthetic ribosome skip sequence that seems to work well in human and mouse cells

DNA sequence in the plasmid sequence files
