

# pCW Lysosomal-METRIQ (DNaseII-sfGFP-T2A-mCherry (Amp))

Backbone vector of pCW Lysosomal-METRIQ is pCW57.1 lentiviral vector (Addgene 41393) containing the single-vector tet-on system. After generation of stable cell line (puromycin selection) by lentivirus system, addition of 1-3 ug/ml doxycycline in culture medium is required for the lysosomal-METRIQ expression.
