

This gel depicts the NEB 1kb ladder and a digestion of the plasmid pLacO-pEF1 α -RFP with the following enzymes: AgeI-HF and Sall-HF.

Plasmid 179507:
pLacO-pEF1 α -RFP

DNA digested with an AgeI-HF/Sall-HF double digest for **2 hours**.
Gel: 0.8% agarose stained with 5 uL of ethidium bromide.
Ran for 1.5 hours at 100 volts.
