

This gel depicts the NEB 1kb ladder and a digestion of the plasmid CAGGS-losSTOPlox-ClaI flp-in with the following enzymes: NheI-HF and ClaI.

Plasmid 21548:
CAGGS-losSTOPlox-ClaI flp-in

DNA digested with NheI-HF/ClaI double digest for **2 hours**.
Gel: 0.8% agarose stained with 5 uL of ethidium bromide.
Ran for 1.5 hours at 100 volts.
