

This gel depicts the NEB 1kb ladder and a digestion of the plasmid pET His6 MBP TEV LIC cloning vector (1M) with the following enzymes: BamHI-HF and SphI-HF.

Plasmid 29656:
pET His6 MBP TEV LIC cloning vector
(1M)

DNA digested with BamHI-HF single digests and BamHI-HF/ SphI-HF double digest for **2 hours**.

Gel: 0.8% agarose stained with 6 uL of ethidium bromide.

Ran for 1.5 hours at 100 volts.
