

This gel depicts the NEB 1kb ladder and a digestion of the plasmid pOSIP-CT (CamR, P21) with the following enzymes: KpnI-HF, PstI-HF, HindIII-HF and KpnI-HF + PstI-HF

DNA digested with KpnI-HF, PstI-HF, HindIII-HF and KpnI-HF+PstI-HF for **2 hours**  
Gel: 0.8% TAE stained with 100 ml 1X TAE and 5uL of ethidium bromide  
Ran for 2 hours at **46** volts
