

This gel depicts the NEB 1kb extended ladder and a digestion of the plasmid LSB-hsa-miR-223-5p with the following enzymes: XbaI and NheI-HF.

Plasmid 58379:
pAAV/D374Y-hPCSK9

DNA digested with XbaI and NheI-HF double digest for **2 hours**.
Gel: 0.8% agarose stained with 5 uL of ethidium bromide.
Ran for 1.5 hours at 100 volts.
