

This gel depicts the NEB 1kb ladder and a digestion of the plasmid pCITF-KCC2 with the following enzymes: NheI HF, RsrII and NheI HF + RsrII

Plasmid 61404: pCITF-KCC2

DNA digested with NheI HF, RsrII single digests and NheI HF + RsrII double digest for **2 hours**

Gel: .8% TAE stained with 150 ml 1X TAE and 3uL of ethidium bromide

Ran for 1 hour at 100 volts
