

PmeI AflIII HIII **FLAG Brd4 BD mutant** SphI HIII PvuII XhoI Eco0109I ApaI PmeI

The diagram shows a DNA construct with the following restriction sites from left to right: PmeI, AflIII, HIII, **FLAG Brd4 BD mutant**, SphI, HIII, PvuII, XhoI, Eco0109I, ApaI, and PmeI. Two lines originate from the first and last PmeI sites and converge at a point labeled "pcDNA5 frt/to", indicating a cloning strategy.
